ABOUT THE FILM

As the world evolves with the use of technology, so does the landscape of childhood. Subject matter experts and researchers are quick to point out that we don't have enough data to say what causes what when it comes to children and the impact of screen time, but we do know that technology, the advent of the smartphones, and other mobile devices has changed the way children are accessing information, interacting with each other and people they meet on the Internet.

The film covers adult subject matter and you will hear from teens being real about their environment. If you would like to view the movie before the screening, you can view it free at:
